

Accountant

Finance, invoice, client, payment, activity, and reporting access.

Finance Access

Accountants can review the financial side of the workspace without managing queue operations or user settings. This role is for bookkeeping, invoice review, payment review, client balance review, and reports.

What This Role Can Access

- Dashboard, Estimates, Invoices, Payments, Clients, Reports, and Activity.
- Create and review estimates and invoices.
- Record payments and review batch payment history.
- Review client balances, aging, revenue, and activity logs.

Important Guardrails

- Accountants should not need property manager portal access.
- Do not change services, user roles, or workspace settings unless asked.
- Keep customer financial information private.
- When in doubt, leave a note and ask the owner before changing records.

Review Open Money

1. Open the dashboard and review unpaid balances and open invoices.
2. Use Invoices for current invoice status, draft balances, aging, and documents ready for payment.
3. Use Payments when one check covers more than one invoice.

Record a Payment

1. Open Payments and search for the customer or invoice group.
2. Select the invoices paid by the same check.
3. Confirm the total, enter the payment details, and mark the selected invoices paid.

Review Reports

1. Use Reports for revenue, invoice aging, queue history summaries, and readiness metrics.
2. Use Activity to confirm who created or changed important records.
3. If a number looks wrong, check the invoice, estimate, and payment records before changing anything.

Workspace reminder: Trimax supports more than one business. Always confirm you are working in the correct workspace before creating queue items, estimates, invoices, services, payments, or reports.
